Active Weather Warnings, Watches and Advisories by County:

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

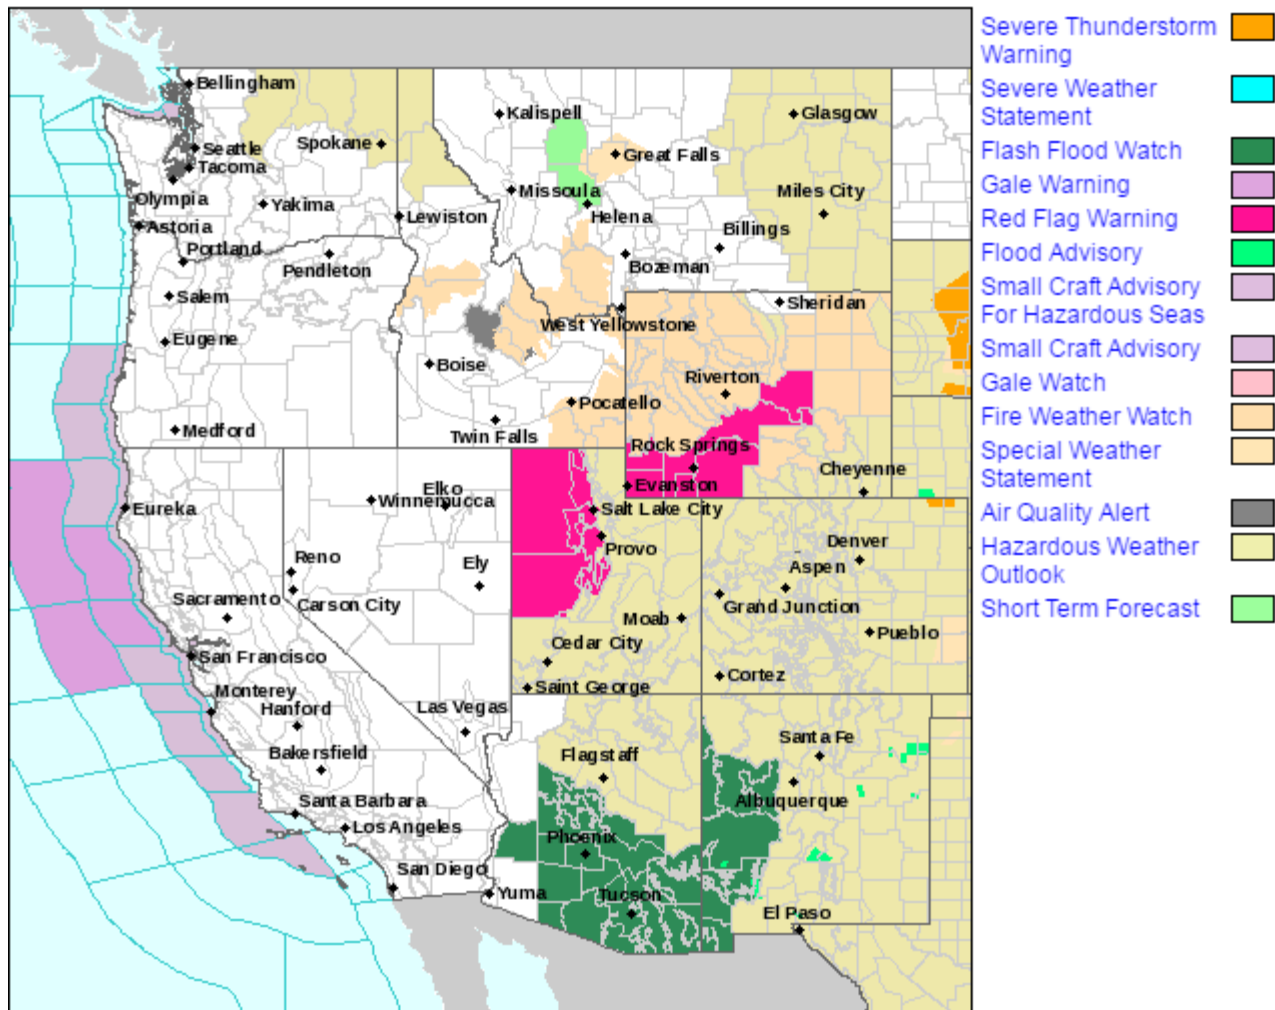

A low pressure trough will remain over the Northern California region through Wednesday. Occasional disturbances moving through the trough will produce a slight chance of showers or thunderstorms in southern OR each day. Clouds will form in the far northern end of the Northern California region each afternoon, and there is a remote chance that a shower or thunderstorm may form near the Oregon state line. On Tuesday chances of far northern showers or thunderstorms are a little higher as a slightly stronger disturbance passes nearby. The marine layer is near 2000 ft and morning low cloudiness will continue to push well inland into the coastal basins through Wednesday. Mild temperatures and somewhat stronger than normal sea breeze can be expected over the next few days under the deeper marine layer. Afternoon SW to W winds over the higher terrain and east of the Cascade-Sierra crest will gust to 25-30 mph each day. Night/morning NW to NE surface winds in and around the Sacramento Valley will gust to 20-25 mph, but winds will become light upslope/up-valley each afternoon. On Thursday strong high pressure will move over the North Ops region and produce warmer and drier conditions with light winds through Saturday. Another Pacific low pressure trough will bring a cooling trend with increasing winds beginning Saturday night.

SOUTHERN CALIFORNIA

A stationary low pressure area centered over western Washington will keep a broad trough across the state during the next few days. This will result in temperatures remaining near normal with a deep marine layer hugging the coastal regions. The depth of the marine layer has not changed much since yesterday and elevations below 2,000 feet will continue to see low clouds through the mid morning. It will turn breezy again this afternoon across the Kern County Mountains, the Antelope Valley and the Banning Pass where west wind gusts to 30 mph can be expected. Local south winds of 10-20 mph will continue in and near the Cajon Pass. Northwest winds of 15-25 mph can also be expected this afternoon along the central coast. Minimum RH will drop into the 8-12% range once again over the Sierra east of the Crest into Mono County while other areas in the mountains see readings remain in the teens this afternoon. Very little change is expected Tuesday. On Wednesday, the trough will finally move inland which may allow the marine layer to increase in depth. Some patchy drizzle may also develop Wednesday morning along the lower coastal slopes. Later this week, high pressure is expected to rebuild over the area. This will lead to warmer temperatures for the weekend. Highs will be back in the upper 90s in the interior valleys and foothills with readings over 100 in the San Joaquin Valley by Saturday. Cooler weather may return early next week. No thunderstorms are expected during the next 7 days.
